

KXTEA308E

Up to 3 lines and 8 extensions

Ideal for small businesses or home offices

PRODUCT DESCRIPTION

Advanced Hybrid Telephone System - up to 8 extensions

The KXTEA308E Advanced Hybrid PBX System can cost effectively support all your personal and business communication needs. The system comes supplied with 3 lines and 8 extensions.

Caller ID

The system is compatible with Caller ID service (optional) which allows a user to see the caller's information before they answer a call, for better call management.

Voice Messaging

Enjoy the business benefits and efficiency of using voice messaging without adding a separate voicemail system. The optional voice message card ensures you never miss an important call - giving your customers the option to leave a message when you are not available.

DISA

The KXTEA308E supports Direct Inward System Access (DISA) functions (optional) that allows outside callers to access any extension without going through an operator. Automatic greeting messages can be recorded by the operator or manager directing the caller to the appropriate destination or department. The DISA feature can drastically reduce the amount of call traffic handled by the operator to spend more time with new or important customers.

Handsets

This system is compatible with the KXT7700 series range of analogue handsets.
