CAT5e VDSL/ADSL Extension Kit Instructions

Locate unfiltered connections on the faceplate to be used, common versions are pictured below, these are normally labelled "A" & "B".

Terminate the BLUE pair to these terminals using the IDC tool provided.  Solid BLUE goes to "A" BLUE/WHITE goes to "B".

Run the cable to desired location & terminate the BLUE pair to the RJ45 socket.

Terminate to "4" & "5".  Solid BLUE goes to 4 & BLUE/WHITE goes to "5". For best speeds keep the number of bends to a minimum & make the extension as short as possible. Do not pinch the cable with clips or staples. The RJ45 socket accepts RJ11 & RJ45 plugs (the same as filtered faceplates).
